Power Your Business with CIZARO
Taking a look at the key features

Take advantage of specialized, easy-to-use sales management tools

As a manager, you can now delegate decision making to your sales team in a controlled manner, with the tools personalized offer, quotations, minimum price and suggested price in which the salesperson can negotiate quantities and prices with the client in a flexible and safe manner without generating losses with the objective of increasing the sale and/or the value of the average ticket.

CIZARO

Distribution Centers, Warehouses, Wholesalers and Points Of Sale (POS)

Manage your inventories to the maximum detail (inventory history)

Manage your inventories with detailed information through the transactional Kardex that provides individualization and high traceability on inventory movements. You can consult product rotation and reports by date and history by type of movement or product. Also, manage information through barcodes, customized measures, SKU, lot number, unique number (serial type) and much more. Value your inventories with the different methodologies used by financial standards, define maximum and minimum replenishment according to your needs supported with AI technology.

SUPPLY AND INVENTORY

Supply and inventory

Manage inventory by:
- Single or multiple warehouse management.
- Inventory counting (various inventory counting methods).
- Inventory control: with minimum stock, maximum stock controlled by AI and alerts.
- Purchase measurement, inventory measurement, sales measurement.
- Packaged sales by **product groups.**

FIFO / LIFO.

**Support of multiple inventories and inventory movements:**
- Advanced Kardex: a detailed history with powerful inventory record.
- Detailed production transactions.
- Quality control of inventory or factory processes.
- Manage information by Cost Centers.

Various counting methods, such as:
- Inventory level by warehouse, dispatch and online store.
- Performs inventories with the application of physical taking simplifying the process quickly and efficiently.

Create products with high information content through multidimensional inventory management defined in a multidimensional manner

Extend your inventory management power through unlimited dimensional references with coded information such as size, color, width, length, etc. In addition, save time and money by easily and quickly locating products on the shelves, create sophisticated barcodes through a combination of references and a query matrix to compare existing products by each of the dimensions parameterized in the inventory module, with no limit on quantity as the platform is open.

Quickly locate merchandise and optimize warehouse space with integrated WMS system

Get the best out of your warehouse and storage spaces with the WMS system that allows you to quickly locate the storage site of a product in the warehouse and systematize the infrastructure of your warehouse according to your needs. Optimize the storage of products and organize the warehouse in a productive way, no more lost sales for not being able to locate your products quickly. WMS - Warehouse Management System - to track product location and quantities within the Inventory (Rack-Rack, Sector, Level, Floor, ETC).

Innovative **Product Management** Functionality
Optimize your Inventory with **CIZARO**

Unlimited multi-tier pricelist: Configure price lists per product for different types of customers, such as End Consumers, Retailers, Distributors, or Wholesalers, setting specific prices for each.

Variants (matrix) and barcodes: Create product variants, such as different colors or sizes, and assign a barcode to each variant. This helps you reduce the number of products in inventory, especially useful for features such as seed color.

Product management by lot, measures, and expiration date: Record lot information, units of measure, and expiration dates for better control and tracking of products.

Quantity per box and measures: Specifies the number of products per box and records the corresponding measures to facilitate inventory and logistics management.

MOQ (Minimum Order Quantity): Establishes a minimum quantity required to place an order, ensuring an adequate level of sales or fulfillment of supplier requirements.

Innovative **Product Management** Functionality
Optimize your Inventory with **CIZARO**

Minimum and suggested price: Defines a minimum and suggested price for products, providing guidance on prices to be used and ensuring adequate profitability.

Parent-child product relationships: Establishes relationships between main products and their related variants or components, enabling more efficient management of complex products.

Barcode generator: Easily create barcodes for products, streamlining the inventory tracking and management process.

Label printing with CIZARO: Generate customized labels with detailed product information using CIZARO's integrated functionality.

Easy product and category management: Organize and manage your products by category or reference using product kits, which allow you to group multiple products into a single composite.

Product catalog generation

CIZARO offers a powerful catalog generation tool that allows you to create product catalogs quickly and easily. You can customize the look and feel, add images, descriptions, prices and any other relevant information. This allows you to present your products in a professional and attractive way, facilitating their promotion and sale.

Hybrid catalog sales via Tablet

With CIZARO, you can carry your product catalog on a tablet and make sales in a hybrid way, combining the use of physical catalogs and digital technology. This allows you to display your products interactively, share detailed information with customers and take orders instantly. In addition, you can take advantage of the benefits of mobility to reach more customers and offer personalized service.

Catalog sales with e-commerce integration

CIZARO offers seamless integration with your e-commerce platform. This means that you can use your product catalog generated in CIZARO to feed your online store automatically. Changes you make to the catalog, such as adding new products, updating prices or modifying descriptions, are immediately reflected in your online store. This simplifies the administration process and ensures consistency of information across all sales channels.

Incorporate the production process with the sales strategy

Be proactive and generate production or purchase orders from the ERP, POS to CIZARO production system and from there take control of production, including tracking of materials needed in the process.

Use the bill of materials (BOM), assembly line, plants, cost, time, capacity planning, resources for production. Identifies and minimizes bottlenecks.

Use tools for visualization of production planning, applications for the management of production lines on site and connectivity with production equipment with SCADA protocol, use the production simulation environment to improve their production strategy.

Create labels and barcodes quickly

With the ability to create and print any barcode label design and format, you can easily and quickly manage inventory product labels yourself with high accuracy, thus reducing errors at every stage of store inventory management.

CIZARO

Fully integrate the business process and its financials into the accounting system.

No more separate systems or long hours working on separate spreadsheets.

Quantify cash counts, track and control expenses, outstanding payments, journal entries, general ledgers, account listing, IFRS reporting, and issue payments and remittance collection through CIZARO's accounting module. CIZARO offers seamless integration with QuickBooks for efficient financial management and accurate tracking of accounting transactions.

Feel at ease with CIZARO's high-level security system.

(Role-based access control)

Create and define roles and permissions to users in a flexible, detailed and unlimited way. Allows access exclusively to specific functionalities, additionally allows audit and change management. The system has a traceability log of use and access to the system. It shows the information of the changes made by users in the system such as: creation, update, deletion and changes of values, in addition to tracking the printing of reports generated from the system.

Key supplier management functionalities:

CIZARO offers several functionalities related to supplier management, such as purchase orders and quotations, receipt of purchase orders, returns of goods to suppliers, supplier debit notes for future purchases, registration of vouchers and receipts, as well as tracking of transport, credit notes and supplier debt in different periods.

Other vapes background brochure

Integrates logistics and supply chain management:

CIZARO integrates efficiently with logistics and supply chain management. You can compare supplier costs, place purchase orders with dual currency and exchange rates, manage batch orders, and control processes such as ordering, receiving, reseller returns (RTV) and debit memos. Interactive and visual experience: Empower your business with CIZARO smart displays

CIZARO offers specialized systems for screen management, covering various functionalities. First, it has a second point-of-sale (POS) screen that displays relevant sales information to the customer. This second screen provides details on products purchased, total amounts, discounts applied and other useful data to enhance the shopping experience.

In addition, the platform also includes a digital signage system, which enables the creation and management of visual content through screens strategically located in the store. Through this feature, businesses can display advertisements, promotions, informative messages and any other type of visual content to attract the attention of customers and improve communication with them.

CIZARO also offers a barcode display system that allows customers to quickly and easily check the products and inventory available in the store. By scanning barcodes with a scanner or mobile device, customers can access detailed information about each product, such as its description, price, inventory availability and possible associated offers.

These functionalities give businesses the ability to improve communication with their customers, provide accurate and relevant information in real time, and optimize the shopping experience by displaying data and content of interest on strategic in-store screens.

Customer Service Management

Improve after-sales, customer service and product reservations.

With CIZARO you can create, manage and monitor warranties, additional services, orders and reservations, which helps you improve customer satisfaction. You can manage after-sales, customer service and product reservations by creating your own process control flows against any product, order or request, with a detailed level of information. With these features you will stand out from your competition.

Manage customer information, orders, requests, complaints and claims (PQR).

Have at hand a specialized process flow control that allows you to track detailed requests, orders, petitions, complaints and claims, restore the good relationship with your customers and provide better customer service with timely follow-up and response to PQR's.

Optimize customer satisfaction with CIZARO's powerful returns and customer service module".

CIZARO offers a robust set of features for efficient returns handling and customer service. Users can process refunds on a per-order or per-customer basis, allowing them to effectively manage returns and ensure customer satisfaction. In addition, credit notes can be generated for customers, facilitating credit and refund management. The ability to manage customer returns in batches provides greater efficiency in the return process, enabling fast and accurate handling of return requests.

Fully manage distribution, dispatch and transportation centers

Manage the dispatch module and configure the distribution center depending on the regions of the country and locations of the headquarters. Dispatch orders partially or completely dispatch the orders from the store or distribution center and control the payment against the delivery according to the defined document, whether it is a delivery order, payment support, remittance, or invoice. Decide the way of delivery and collection that CIZARO with its modern system of dispatch and payment management will control 100%, manage immediate deliveries, handling of "Picking and Packing" zones, delivery by different locations or delivery from dispatch centers. Additionally, manage the process of shipments and returns in a controlled manner, manage customer and delivery addresses, and integrate with transport companies.
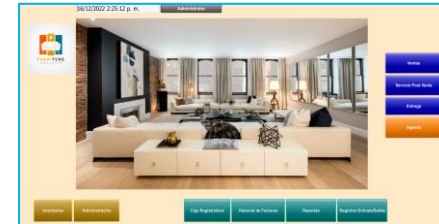

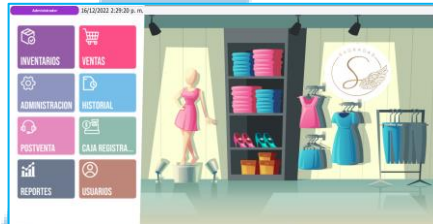

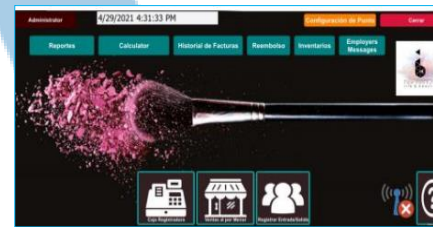

Domiciles, Dispatch and Transportation

⚠ Shipment and dispatch management with a specific module for a better organization of operations.

⚠ Control customer returns in case the customer does not receive his products.

⚠ Vehicle and transport management.

⚠ Customer address management.

Use the customization functions of the user interface

Customize your CIZARO ERP and POS (PTV) application to your own taste, with dynamic management in the design of the end user interface, taking it to a unique level of customization, with dynamic creation of screens and functionalities according to the user's profile. POS with touch screen support (buttons) or multiple filter management for product selection.

Examples of POS store

Advanced calendar and unified document management

Advanced calendar and Google Calendar integration

CIZARO Advanced Calendar is an essential tool for organizing and scheduling business activities. It allows users to create thematic agendas, set recurring events, assign reminders and share the calendar with the team. Integration with Google Calendar provides a unified view of commitments and tasks, accessible from different devices. In addition, the CIZARO calendar includes administration tools that optimize planning and time management, allowing you to set priorities, assign responsibilities, set alarms and track task progress. This efficient management ensures that deadlines are met and maximizes productivity.

Unified document management

CIZARO offers a unified document management solution that simplifies and streamlines document processes across the organization. Users can store, organize and search different types of documents, set permissions and access levels, and collaborate in real time in a secure manner, easily convert physical documents to digital documents with customized OCR and document scanning modules easily in suppliers, services, invoices or any CIZARO module.
This functionality ensures confidentiality and security of information, improves productivity and reduces the risk of document loss.

Maximize your time and simplify management with CIZARO

Powerful Order and Sales Order Management Functionalities

Pending orders
Allows you to view and manage orders that are in process or pending delivery.

Quotations:
Facilitates the creation and management of quotations for customers, providing detailed information on products and prices.
